

Temperature-liquid Integrated Level Transmitter

GaMicos

GLT500T

PRODUCT OVERVIEW

GLT500T temperature and liquid level transmitter is specially designed for level measurement with temperature monitoring requirements. It adopts high reliability piezoresistive silicon pressure sensor as pressure sensing components and PT100 as temperature sensing element. After automatic temperature compensation, programmable digital circuit correction and signal conditioning, it can output standard analog and digital signals. The products are carefully designed, components screening, fixed process, through pressure cycle, aging, environmental simulation test and other methods to ensure that each product is stable and reliable.
