

Pressure Transmitter

GAMICOS

GPT241

PRODUCT OVERVIEW //

GPT241 monocrystalline silicon pressure transmitter is a high performance pressure transmitter with international leading technology meticulously designed by GAMICOS instrument, using the world's most advanced monocrystalline silicon pressure sensor technology and patent encapsulation technology. Monocrystalline pressure sensor locates on the top of the metal body and stays away from the medium interface to realize mechanical isolation and thermal isolation. Glass sintering sensor wire realizes high strength electrical insulation of metal base and improves the capability of flexibility of electronic circuit and transient voltage resistance protection. All these original encapsulation technologies easily enable GPT241 to cope with extreme chemical occasion and mechanical load, and own strong resistance to EMI, sufficient to respond to the most rigorous industrial environment applications, which are the genuine invisible instruments.
